Note: Figures are percentages unless otherwise stated. The pain intensity and pain interference scores were drawn from individual items of the Chronic Pain Grade questionnaire.

^a Differences in means analyzed with *t*-test; differences in proportions analyzed with chi-square tests. Numbers shown are *t* or χ^2 values.

^b Scores range from 0-10; higher scores indicate higher intensity of pain.

^c Scores range from 0-10; higher scores indicate higher level of interference.

^d Grade zero: pain free; Grade I: low disability-low intensity; Grade II: low disability-high intensity; Grade III: high

disability-moderately limiting; Grade IV: high disability-severely limiting.

^e Scores range from 0-63; higher scores indicate more depressive symptoms.

^f Scores range from 0-39; higher scores indicate more depressive symptoms.

^g Scores range from 0-60; higher scores indicate more depressive symptoms.
