

Figure 1. Standardized path coefficients for the two-factor correlated model of the ChPVAQ-13 (McCracken, 2007). $S-B\chi^2 = 104.70$ ($p < 0.001$); $df = 64$; $CFI = 0.93$; $RMSEA = 0.06$ (90% CI: 0.03, 0.07). *Item number is based on the 16-item version of PVAQ.
