

# GMoodle with AI chatbot:

<https://gmoodle.eduhk.hk/>

GMoodle is an adaptive learning platform with AI chatbot feature to provide personalized learning experience to students to meet diverse learning needs. The personalized reading recommendation will be provided based on students' learning progress and performance in the formative assessments. Students can access online materials with real-time progress report to indicate their learning status in the group and class. On this platform, students can receive one-on-one individualized tutoring in AI chatbot to receive customized study tips to enhance students' learning performance and experience. Student can learn about their learning and achievement during the conversation in the chatbot. Students can ask questions and obtain immediate feedback without time and geographical limitations. Teachers can also use it to build their knowledge database to improve teaching productivity, reduce repetitive tasks and identify common learning problems.

## To provide personalized advice for students...
